

Vericept Control 360°

Overview

Vericept Control 360° gives corporations and organizations immediate brand and reputation protection by identifying and stopping compliance violations, intellectual property theft, customer data loss and other legal exposure before it occurs.

Policy-based settings offer automatic encryption, Self-Compliance, blocking or quarantine of email communication in violation of corporate and compliance policies. The Vericept Intelligent Content Control Engine analyzes each piece of communication by reading the content, understanding the context and analyzing the structure. If the communication is in violation of a policy, the appropriate action is applied to the email.

By automating the process of send, encrypt, block or quarantine, Vericept 360° Email Control protects the organizations against damaging insider activity whether inadvertent or malicious in nature.

Identifying the Insider Risk

With information theft on the rise, corporations now need to protect and control intellectual property not only from external threats, but also from the "trusted insider." Employees within an organization have access to proprietary and confidential company information and have the power to disclose details about the company without the company ever knowing.

Would you know if....

Confidential information about an upcoming acquisition was being disclosed?

Unencrypted PHI, customer account information, cardholder data or employee records were being sent out of your organization?

A resigning employee was stealing proprietary information for a competitor?

With Vericept, you would know.

The Vericept Control 360° Solution

Vericept offers organizations advanced content control without impeding the flow of business to:

- Protect customer or patient data from falling into the wrong hands
- Protect business plans, customer lists and product plans from being sent to competitors
- Protect against sexual harassment suits by stopping questionable communication

Vericept Control 360° provides advanced content control with early identification of violations, automated email encryption, Email Self-Compliance, blocking and quarantine capability. Working in combination with the Vericept content detection technologies and the pre-defined Risk Categories, Vericept provides more visibility and control than any other content monitoring solution on the market today.

- Early identification of violations with 360° visibility and insider risk correlation

Early Identification of Violations

Vericept's Content 360° visibility provides early detection of impending threats and insider risk. Utilizing over 70 pre-defined Risk Categories and custom categories, Vericept monitors all Internet-based communication and identifies areas of immediate financial, reputation and legal risk. By correlating events and analyzing patterns of behavior, Vericept can help organizations to identify an incident before it occurs and take immediate action to protect against serious security breaches that can cause irreversible brand and reputation damage.

Automatic Email Encryption

Automatically encrypt email communication. Compliance regulations such as PCI DSS, GLBA, HIPAA and state data privacy laws require that unencrypted non-public personal information be protected against exposure to unauthorized individuals. In addition, organizations need to protect proprietary information from falling into the wrong hands. Vericept's Control 360° identifies email communication containing unencrypted information and automatically encrypts without any user interaction and without impeding the flow of business. Encryption settings are based on the organization's policies for customer account information, PHI, employee data, business plans, client lists, merger and acquisition information, financials, source code and other valuable informational assets.

Email Self-Compliance™

Vericept's unique Email Self-Compliance functionality allows for content control without impeding the flow of business by allowing the employee to decide whether or not an email communication should proceed. When a violation occurs, Email Self-Compliance sends an alert back to the employee with information on the violation and allows the sender to decide whether or not to continue sending the message, to encrypt and then send, or not to send the message at all. A copy of the violation is also logged for the Vericept Reviewer. Email Self-Compliance provides non-intrusive content control and helps to train and remind employees of corporate policy.

Email Quarantine

Email containing questionable violations can be quarantined, reviewed and then released or deleted. User alerts can be sent to the sender to inform him/her that the communication was intercepted and additional information is needed to release. Vericept's quarantine functionality provides organizations with time to review suspicious activity and severe policy violations before an event becomes an issue.

Email Blocking

Stop proprietary information from leaving the network. Based on the Vericept pre-defined Risk Categories, custom categories and inclusion/exclusion policies, an organization can identify communication that should be stopped before it leaves the organization. Vericept's blocking capability intercepts the communication and immediately deletes it.

Vericept User Alerts

Vericept User Alerts can help train and remind staff of corporate and compliance policies at the time of the event. Companies can choose to send these policy-based alerts to remind users to encrypt confidential customer data or to alert them that an email has been blocked or quarantined. Alerts can be easily customized to include a personalized corporate message, and provide further information and instruction for the sender.

Vericept Control 360° Features

- Stops information leaks ✓
- Automatically encrypts customer data ✓
- Alerts employees to policy violations and allows them to decide ✓
- Reminds and trains users on compliance and corporate policies ✓
- Controls without impeding the flow of business ✓

WHY VERICEPT?

Vericept Corporation is the leading provider of comprehensive compliance and content control solutions providing 360° visibility and control of inappropriate activity across all forms of Internet traffic, such as email, chat, P2P, and FTP. Vericept mitigates internal risk by providing enterprise-wide visibility that enables full control of the information exchanged inside and outside an organization. Vericept's patent pending Intelligent Content Control Engine™ dramatically reduces security risks and "insider threats" within an organization. These can include regulation compliance violations, information leaks, inappropriate Internet activity and more. Vericept's real-time content capture enables organizations to act immediately and prevent loss of valuable information assets. Vericept's technology protects more than 2 million users and over 700 customers worldwide everyday.
